

Ilia Pavlovskii

Senior Android Engineer

SUMMARY

Senior Android Engineer with 10+ years of experience architecting high-load mobile and in-car software systems. Proven track record delivering 20+ production solutions across consumer apps, fintech platforms, and Android Automotive (AAOS) navigation ecosystems. Specialized in Kotlin Multiplatform, Jetpack Compose, modular system design, IPC, and performance optimization on resource-constrained devices. Active open-source contributor and technical writer.

EXPERIENCE

Mapbox — Software Development Engineer II

Dec 2023 – Present · Warsaw, Poland

Location data platform powering navigation, mapping, and spatial analytics for mobile, web, and Android Automotive OS across automotive OEMs, logistics, and consumer applications worldwide.

- Architected an asynchronous IPC command framework supporting 30+ bidirectional navigation and camera controls, eliminating race conditions and ensuring deterministic state sync under high-frequency updates across multi-process automotive head units.
- Engineered an end-to-end TTS instruction pipeline and cross-process AudioFocus coordination matrix, guaranteeing reliable turn-by-turn guidance playback without clipping across competing in-car audio streams and voice assistants.
- Delivered a driver-distraction mode UI compliant with ADAS UX guidelines, plus multi-screen navigation across driver and passenger displays with screen-aware UI state.
- Led the migration of an in-car AI assistant from Kotlin Multiplatform to native Android — integrating speech recognition (ASR) and navigation context, and extracting the UI into a standalone SDK.
- Contributed to the Android navigation SDK: routeline styling, worldview rendering, offline tile localisation fallback, headless navigation samples, and maneuver geometry overrides for OEM partners.
- Profiled and optimized memory footprints and rendering pipelines on low-RAM ARM SoCs, reducing map frame drops and lowering cold-start initialization latency on Android Automotive OS (AAOS) targets.

Elinext — Android Software Engineer

Jul 2022 – Dec 2023 · Warsaw, Poland

Worked on Arlo Secure — a large-scale smart home security system with multi-device support and complex delivery pipelines. Focused on improving engineering processes, technical stack modernization, and reducing operational costs.

- Implemented automated multi-channel distribution pipelines (Firebase App Distribution → Google Play Internal/Alpha tracks) for different build flavors and access levels.
- Refactored legacy architecture to support modern delivery formats (AAB / Android App Bundles) and streamlined the release process.
- Introduced unit testing standards and improved tooling, increasing code reliability and reducing regression issues.
- Mentored engineers during the Java → Kotlin migration, establishing consistent code standards and improving onboarding efficiency.

Humans Group — Android Software Engineer

Jan 2020 – Jul 2022 · Warsaw, Poland

Humans.uz is a telecom, banking, and marketplace platform in Uzbekistan. Contributed to the Android application architecture and development process while coordinating technical work across feature teams.

- Accelerated feature delivery from ~2 months to ~3 weeks while maintaining engineering quality and team efficiency.
- Modularized the Android codebase and introduced binary dependency storage to significantly reduce clean build times.
- Established a feature-based development workflow with small cross-functional teams (2–4 engineers per feature).
- Introduced a hybrid MVI + MVVM architecture to structure UI state management and feature development.
- Implemented backend communication based on GraphQL and helped establish a structured workflow for UI design, mobile business logic, and backend integration.

HiQo Solutions — Android Software Engineer

Jun 2019 — Jan 2020 · Minsk, Belarus

HiQo Solutions is a software development company specializing in machine learning, Edge IoT systems, cloud platforms, and advanced software solutions. Contributed to Android projects while supporting engineering processes and team collaboration.

- Mentored Android engineers and supported project coordination across development teams.
- Improved code quality standards and established better engineering practices.
- Set up and maintained CI/CD pipelines to streamline development and release workflows.

Yandex — Android Software Engineer

Jun 2018 — Jun 2019 · Minsk, Belarus

Worked on Yandex Browser, a Chromium-based Android mobile browser. Contributed to UI features, bug fixing, and test automation while supporting the team's transition from Java to Kotlin.

- Developed and maintained UI features and fixes in a large Chromium-based Android codebase.
- Implemented offline Zen feed prefetching, enabling curated news content to be available without internet connectivity.
- Improved engineering workflows by formalizing and integrating Kotlin lint rules during the team's migration from Java to Kotlin.
- Contributed to QA automation and feature delivery within a large-scale browser development team.

Yellow — Android Software Engineer

Jun 2015 — Jun 2018 · Minsk, Belarus

Studio building in-house and custom client apps; delivered all client projects on schedule and placed at a hackathon.

ITM House — Android Software Engineer

Oct 2014 — Jun 2015 · Minsk, Belarus

Outsourcing company; started the FlowerPower project that later seeded the spin-off studio Yellow.

Vega Systems — Middle Android Developer

Feb 2014 — Sep 2014 · Minsk, Belarus

Released ~7 small mobile apps for the Belarusian and Russian business-solutions markets.

Medical Software Solutions — Junior Android Developer

Nov 2012 — Feb 2014 · Minsk, Belarus

First professional role; built POS system prototypes for medical-product sales.

PERSONAL PROJECTS

PolishExam — Polski B1

Kotlin Multiplatform · Compose Multiplatform · AI

Exam-prep platform for the Polish B1 language exam: structured lessons, listening tests, grammar and vocabulary drills, AI-powered essay feedback and full mock exams with progress analytics.

AudioFeed — AI RSS News Briefs & Smart Podcasts

Kotlin Multiplatform · Compose Multiplatform · Supabase · Gemini AI · TTS

Mobile app that consolidates multiple RSS feeds on a topic into unified AI-generated audio briefs and smart podcasts, helping users stay informed in minutes. Built solo for RevenueCat Shipaton 2026.

Other projects: IPSC Hit Factor Calculator (Kotlin Multiplatform, Compose Multiplatform) · Pickly (Kotlin, Jetpack Compose) · Sudostorm (Kotlin, Jetpack Compose) · IPTV Player (Kotlin, Jetpack Compose, Media3 / ExoPlayer) · Elektronika (Kotlin, Wear OS Watch Face API).

EDUCATION

Belarusian State University of Informatics and Radioelectronics

2009 — 2014 · Minsk, Belarus

Bachelor's degree, Computer Systems and Networks

SKILLS

Languages: Kotlin, Java

Core Mobile & Multiplatform: Android SDK, Android Automotive (AAOS), Android Auto, Kotlin Multiplatform (KMP), Compose Multiplatform, Jetpack Compose, Coroutines & Flow

Architecture & Patterns: Clean Architecture, MVI, MVVM, Multi-Module Architecture, IPC, Dependency Injection (Hilt, Dagger)

Data & Networking: Room, SQLite, Retrofit, OkHttp, GraphQL, REST

Automotive & Systems: AudioFocus coordination, ADAS UX guidelines, Mapbox Navigation/Maps SDK, Location/GNSS, Performance Profiling (Perfetto, Android Studio Profiler)

AI Systems: LLM & generative-AI integration (Gemini), speech recognition (ASR) & TTS pipelines, AI-powered product features, AI-assisted development (Claude Code, MCP, agentic workflows)

Tooling & CI/CD: Gradle, GitHub Actions, Bitrise, Firebase

Languages (spoken): English (C1), Polish (C1), Russian (Native)

CERTIFICATIONS

- E-legion & Google — Android Developer School (2015)
- CCNA Exploration: Network Fundamentals
- CCNA Exploration: Routing Protocols and Concepts
- MBA in a Box: Business Lessons from a CEO — Udemy (2024)

EVENTS

RevenueCat Shipaton 2026 — AudioFeed: AI RSS News Briefs & Smart Podcasts

2026 · Online

Solo-built mobile app that consolidates multiple RSS feeds on a topic into unified AI-generated audio briefs and smart podcasts, helping users stay informed in minutes. Built with Kotlin Multiplatform (Compose Multiplatform), Supabase, Gemini AI and text-to-speech.

Engineering Jam 3 — Geography School education app

August 2019 · Minsk, Belarus

Education app for solving geography quizzes. Participation, no prize.

Skywind Hackathon — Stickerbox

August 2016 · Minsk, Belarus

Entertainment app to create custom stickers and send them via an Android keyboard. Diplomas: "Completed MVP", "Drive and fun app", "Selection of the jury".
